

MACHINERY & EQUIPMENT

Same design language as the approved Laxmi homepage

Premium editorial machinery storytelling built from the homepage system: cinematic hero, quiet editorial sections, large real equipment imagery, process context, workshop proof and a decisive final CTA.

Equipment is part of the plant - not the whole story.

Real Laxmi machinery | Real workshop | Real dispatch | Process-led structure

Build it like the homepage

Reuse the visual grammar, not the homepage's exact section content.

HOMEPAGE DNA

Dark cinematic hero

White editorial split

Minimal decision list

Light planning story

Dark proof/video

White company proof

Technical system section

Dark project proof

MACHINERY TRANSLATION

Visual machinery hero

White equipment statement

Production-stage index

Large equipment stories

Dark workshop proof

Technical equipment details

Dispatch evidence

Final system CTA

Rule: keep the same type scale, spacing, navy/blue palette, thin rules, editorial lists, image treatment and alternating visual weight. Change the content rhythm so this feels purpose-built for machinery.

Do not turn the page into a digital brochure with 14 small product cards. The catalogue is the factual source; the current homepage is the visual benchmark.

Engineered for the production line.

The hero introduces machinery through the production system.

MACHINERY & EQUIPMENT

Engineered for the production line.

Explore Laxmi's AAC machinery by process stage - from material preparation through batching, cutting, handling, autoclaving and packing.

EXPLORE MACHINERY

EQUIPMENT

BALL MILL

SLURRY MAKING

SLURRY STORAGE

BALL MILL / REAL LAXMI EQUIPMENT

Hero media: 8-12 second machinery montage or wide workshop shot. Keep action mainly on the right and leave the left text-safe.

Start with the production line

Show the user where each equipment group belongs before diving into machines.

Use one continuous process index instead of seven cards.

Clicking a stage should scroll to or reveal the relevant equipment story. On mobile, use a vertical or horizontally scrollable rail.

Catalogue equipment mapping: Ball Mill, Slurry Making, Slurry Storage, Batching Unit, Precuring, Mould Box, Side Plate, Steam Trolley, Tilting Crane, Grouping Crane, Cutting Machines, Autoclave and Auto Packing Line.

Material preparation

One strong visual story, not three tiny cards.

EQUIPMENT

BALL MILL + SLURRY MAKING + SLURRY STORAGE

The line starts before the mould.

Introduce the Ball Mill, Slurry Making and Slurry Storage as one connected front-end system. Keep descriptions short and process-led.

- 01 BALL MILL
- 02 SLURRY MAKING
- 03 SLURRY STORAGE

Explore the material-preparation stage →

From batching to precuring

Use large visuals with sparse supporting content.

Precise preparation.

Connect Batching Unit, Mould Box, Side Plate, Steam Trolley and Precuring into one stage story. Use real photography and concise labels.

Do not publish unverified machine specifications. The catalogue supplies the machine names and visual evidence; current technical specifications should come from approved product data.

Cutting & handling

Make this one of the visual peaks of the page.

Cutting defines the required product geometry; handling carries the material through the line. Use the large real machinery photographs as proof.

Recommended visual: one dominant cutting-machine image + one smaller crane image + a thin process connector. Avoid a 3-card treatment.

Autoclaving & packing

Use a dark cinematic section to recreate the homepage's visual contrast.

Cure. Handle. Prepare

Autoclaving is the steam-curing stage shown in the catalogue.
Finish the equipment story with the Auto Packing Line.

AUTOCLAVE

AUTO PACKING LINE

SEE THE FULL SYSTEM

Use the dedicated Auto Packing Line imagery from the catalogue for the final downstream visual.

Built, assembled and dispatched

Prove that the equipment is physically manufactured and delivered.

WORKSHOP - fabrication, machining and assembly context.

DISPATCHED - equipment being loaded and sent to project locations.

The catalogue has dedicated Workshop and Dispatched pages. Use these real photographs as direct evidence rather than generic trust statements.

See where the equipment is working → / projects.html

Complete equipment inventory

The inventory should be complete in content, but not necessarily shown as 14 public cards.

01 Ball Mill

02 Slurry Making

03 Slurry Storage

04 Batching Unit

05 Precuring

06 Mould Box

07 Side Plate

08 Steam Trolley

09 Tilting Crane

10 Grouping Crane

11 Advanced Three Stage Cutting Machine

12 Vertical Cutting Machine

13 Autoclave

14 Auto Packing Line

This inventory is grounded in the catalogue equipment pages. Keep machine names accurate and expand detailed content only when current client-approved data is available.

Machinery page SEO

Target commercial intent without turning the copy into keyword wallpaper.

AAC Plant Machinery & Equipment | Laxmi En-Fab Pvt. Ltd.

Title

Explore AAC plant machinery from Laxmi En-Fab, including material preparation, batching, precuring, cutting, handling, autoclaving and packing equipment.

Meta

Engineered for the production line.

H1

AAC plant machinery; AAC plant equipment; AAC block plant machinery; AAC panel plant machinery.

Primary

AAC ball mill; AAC slurry making; AAC batching unit; AAC cutting machine; AAC autoclave; AAC packing line.

Supporting

Solutions; Engineering Center; Projects; About Us; Contact.

Internal links

Write for users first. Explain the machine's role in the production line and link to the relevant system/process content.

Responsive + conversion

Finish the page with the same calm, decisive close as the homepage.

DESKTOP

Large image stories, process rail, editorial splits.

TABLET

Two-column stories, simplified rail, stacked proof.

MOBILE

One-column story, touch-friendly navigation, sticky contact.

Implementation: real Laxmi imagery, subtle IntersectionObserver reveals, reduced-motion support, optimized WebP/AVIF, accessible controls, no heavy animation framework.

Final visual formula: **Big statement** → **real machinery** → **process context** → **workshop proof** → **dispatch proof** → **strong CTA**.
